

Pandas Problem-Solving Question Paper

- Q1. Load a CSV file into a DataFrame. Write code to: (a) View first 10 rows (b) Get shape (c) View data types
- Q2. Write code to select: (a) Column 'revenue' (b) Columns 'country' and 'profit'
- Q3. Filter rows where revenue > 100000 and profit < 0.
- Q4. In column 'employees': (a) Count null values (b) Replace nulls with mean
- Q5. Group by 'country' and compute average revenue.
- Q6. Sort by 'revenue' descending and 'profit' ascending.
- Q7. Replace 0 in 'previous_rank' with NaN and show top 5 value counts including NaN.
- Q8. Explain difference between `df.loc[2, 'revenue']` and `df.iloc[2, 0]`.
- Q9. Create a pivot table with index 'country', values 'revenue' and 'profit', aggregation mean.
- Q10. Compute correlation between 'revenue' and 'profit'. Explain meaning of correlation values.
